in zero variable theories Dr Robert Wicklund invites the reader to consider the psychological perspective of the explainer in examining the over simplifications that have become dominant in modern psychology the author points to such factors as competition with other explainers and pressure to offer and promulgate a unique explanation the explainer is characterized as equating theory with simple fixed categories and as defending those categories as one would defend a personal territory fending off competing explainers through mis use of statistical devices the end result is the formulation of theories that neglect the perspectives of those whose behaviors are to be explained and which simultaneously exclude psychological variables

skeptics have cast doubt on the idea that scientific theories give us a true picture of an objective world Lawrence Sklar examines three kinds of skeptical arguments about scientific truth and explores the important role they play within foundational science itself sklar demonstrates that these kinds of philosophical critique are employed within science and reveals the clear difference between how they operate in a scientific context and more abstract philosophical contexts the underlying theme of theory and truth is that science and philosophy are essential to one another sklar advances the claim that one cannot understand the methods of science without a comprehension of philosophy and one cannot fruitfully pursue philosophy of science without understanding fundamental science as well
